Ford, GM and Stellantis Dominate Transplant Competitors in Annual Kogod Made in America Auto Index

WASHINGTON, D.C. – Governor Matt Blunt, president of the American Automotive Policy Council, today highlighted the dominance of American Automakers in American University's 2021 Kogod Made In America Auto Index.

Together, Ford, General Motors and Stellantis produced 15 of the Top 25 vehicles, 34 of the Top 50 vehicles, as well as the Top 3 trucks and the Top 2 SUVs. Their average Kogod score (56) was 2.8 times higher than the average score for their transplant competitors (20).

"Kogod's 2021 Made in America Auto Index shows Ford, General Motors and Stellantis's overwhelming advantage compared with their transplant competitors," Governor Blunt said. "American Automakers assemble more of their vehicles here, use twice as many auto parts manufactured in the U.S. supply chain, and base nearly 8 times more of their workers across the United States."

Kogod scores automakers based on how much of the manufacturing process in its ranking categories were performed in the U.S. Vehicles earn points, based on where its R&D is performed, where it is assembled, where its engine and transmissions are produced, how much domestic parts it contains and where the automaker is headquartered.

The three American Automakers continue to invest in both the U.S. workforce and U.S. supply chain, as well as source domestic manufacturers for parts. This effort is not only supporting American manufacturing jobs, but also creating new jobs while driving the U.S. economy

The 2021 Kogod Made in American Index can be found [here](#).

The American Automotive Policy Council (AAPC) represents American Automakers Ford Motor Company, General Motors Company and Stellantis. AAPC is a Washington, D.C. association representing the common public policy interests of its member companies.
